### GARDEN CHRYSANTHEMUMS

#### Recent Introductions and Popular Older Kinds

Rooted cuttings will be available from early March and on; pot-grown plants from early April until close of the spring season.

We recommend the potted plants when to be planted outside for cut flowers. This size is also generally used in mail-order and counter trade. When equipped for so doing, we suggest procuring rooted cuttings and potting them for your spring trade and thereby effect a saving both on price and expressage.

**HARDY PHLOX**

Since available stock of Phlox in developed plants have become very limited and probably will be so for some time to come, it would seem advisable for nursery and florist concerns to plant on their grounds enough liners to be grown on for next season's requirements. Your customers will buy them at sight while in bloom. The following select assortment of varieties are offered for delivery from mid-April through May. For best results, plant at early garden making time on well prepared soil.
